---

## Learning Outcomes:

Identify properties of elementary functions (formed by composition of power, exponential, logarithmic, and trigonometric functions and their inverses)

## Definition of a Function

A **function**  $f$  is a rule that assigns to each element  $x$  in a set  $D$  exactly one element, called  $f(x)$ , in a set  $E$ .

Set  $D$  is called the \_\_\_\_\_ of the function.

Set  $E$  is called the \_\_\_\_\_ of the function.

## Definition of a Function

A **function**  $f$  is a rule that assigns to each element  $x$  in a set  $D$  exactly one element, called  $f(x)$ , in a set  $E$ .

Set  $D$  is called the **domain** of the function.

Set  $E$  is called the **range** of the function.
